

JDBC Updating Row

Example

```
//import sql package
import java.sql.*;

public class UpdateDemo {
    public static void main (String [] args) throws Exception {
        //define variables
        String driver = "oracle.jdbc.driver.OracleDriver";
        String url = "jdbc:oracle:thin:@localhost:1521:xe";
        String user = "system";
        String pass = "system";
        String sql = "UPDATE cricketers SET name='MAHI' WHERE
                    jersey = 7 ";

        //load the driver
        Class.forName(driver);

        //establish connection
        Connection con = DriverManager.getConnection(url, user, pass);

        //creating statement
        Statement st = con.createStatement();
        st.executeUpdate (sql);
    }
}
```

Before Updating

JERSEY	NAME
7	<u>DHONI</u>
45	ROHIT
18	KOHLI

After Updating

JERSEY	NAME
7	<u>MAHI</u>
45	ROHIT
18	KOHLI
