

1-D Array example without loops

As in java arrays are objects. To create an array we need to use new keyword, as shown below

```
class Result
{
    public static void main (String [] args)
    {
        int marks [] = new int [5];
        marks [0] = 55;
        marks [1] = 65;
        marks [2] = 75;
        marks [3] = 85;
        marks [4] = 95;
        System.out.println("Marks of Students");
        System.out.println(marks [0]);
        System.out.println(marks [1]);
        System.out.println(marks [2]);
        System.out.println(marks [3]);
        System.out.println(marks [4]);
    }
}
```

Output :-

Marks of students :-

55

65

75

85

95.
