

Different Syntax of main()

```
package practice;  
public class MainDemo  
{  
    public static void main(String[] args)  
    {  
        System.out.println("main() is executing");  
    }  
}
```

output:
main() is executing

```
package practice;  
public class MainDemo  
{  
    public static void main(String args[])  
    {  
        System.out.println("main() is executing");  
    }  
}
```

output:
main() is executing

```
package practice;  
public class MainDemo  
{  
    public static void main (String... args)  
    {  
        System.out.println ("main() is executing");  
    }  
}
```

output

main() is executing

```
package practice;  
public class MainDemo  
{  
    static public void main (String... args)  
    {  
        System.out.println ("main() is executing");  
    }  
}
```

output:

main() is executing

```
package practice;  
public class MainDemo  
{  
    final static public void main(String... args)  
    {  
        System.out.println("main() is executing");  
    }  
}
```

output
main() is executing
